Status	Finished
Started	Saturday, 10 October 2026, 1:47 PM
Completed	Saturday, 10 October 2026, 1:52 PM
Duration	5 mins 8 secs
Grade	**13.00** out of 15.00 (**86.67**%)

Question **1**

Complete

Mark 1.00 out of 1.00

What is a significant characteristic of Bubble Sort?

a. It recursively sorts subproblems
b. It divides the list into sublists
c. It bubbles up the largest element in each pass
d. It uses the heap data structure

The correct answer is: It bubbles up the largest element in each pass

Question **2**

Complete

Mark 0.00 out of 1.00

In Merge Sort, what happens after dividing the input into smaller parts?

a. Each part is searched for a specific element
b. The parts are merged without sorting
c. The parts are ignored
d. Each part is sorted independently

The correct answer is: Each part is sorted independently

Question **3**

Complete

Mark 1.00 out of 1.00

Which of the following is not an in-place sorting algorithm?

- a. Merge sort
- b. Heap sort
- c. Selection sort
- d. Quick sort

The correct answer is:
Merge sort

Question **4**

Complete

Mark 1.00 out of 1.00

Algorithm design technique used in merge sort algorithm is

- a. Backtracking
- b. Dynamic programming
- c. Greedy method
- d. Divide and conquer

The correct answer is:
Divide and conquer

Question **5**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm involves comparing elements and swapping adjacent items that are out of order?

- a. Bubble Sort
- b. Merge Sort
- c. Binary Search
- d. Linear Search

The correct answer is: Bubble Sort

Question **6**

Complete

Mark 1.00 out of 1.00

What type of problems can sorting help solve efficiently?

- a. All of the above
- b. Searching
- c. Duplicates
- d. Selection

The correct answer is: All of the above

Question **7**

Complete

Mark 1.00 out of 1.00

Which of the following is a key reason for the importance of sorting algorithms?

- a. Sorting helps in finding duplicates quickly
- b. Sorting is rarely used in programming
- c. Sorting makes it harder to search for items
- d. Sorting decreases the efficiency of selection operations

The correct answer is: Sorting helps in finding duplicates quickly

Question **8**

Complete

Mark 1.00 out of 1.00

The process of placing or rearranging a collection of elements into a particular order is known as

- a. Sorting
- b. Merging
- c. Rearranging
- d. Searching

The correct answer is: Sorting

Question **9**

Complete

Mark 1.00 out of 1.00

Which of the following best describes the term "sorting" in computer science?

- a. Arranging data in a specific order
- b. Finding a specific element in a list
- c. Merging two datasets
- d. Removing duplicates from a list

The correct answer is: Arranging data in a specific order

Question **10**

Complete

Mark 1.00 out of 1.00

What is sorting in the context of computer science?

- a. Arranging data in a particular format
- b. Deleting data from a list
- c. Inserting data into a list
- d. Searching for data in a list

The correct answer is: Arranging data in a particular format

Question **11**

Complete

Mark 1.00 out of 1.00

What is the primary advantage of the divide-and-conquer approach in sorting algorithms?

- a. It avoids the need for recursion
- b. It only works on small datasets
- c. It simplifies the sorting process by using only one pass
- d. It allows for efficient parallel processing and sorting of data

The correct answer is: It allows for efficient parallel processing and sorting of data

Question **12**

Complete

Mark 1.00 out of 1.00

What is one advantage of sorting a list before performing a search operation?

- a. It allows for faster searching
- b. It makes the search operation slower
- c. It increases the number of comparisons needed
- d. It has no effect on the search operation

The correct answer is: It allows for faster searching

Question **13**

Complete

Mark 0.00 out of 1.00

Very slow way of sorting is_____

- a. Bubble sort
- b. Insertion sort
- c. Heap sort
- d. Quick sort

The correct answer is:
Insertion sort

Question **14**

Complete

Mark 1.00 out of 1.00

What is the primary benefit of using sorting algorithms in programming?

- a. Decreases the efficiency of algorithms
- b. Provides a basis for other algorithms to work efficiently
- c. Makes data harder to manage
- d. Makes code execution slower

The correct answer is: Provides a basis for other algorithms to work efficiently

Question **15**

Complete

Mark 1.00 out of 1.00

What does the Bubble Sort algorithm primarily focus on during each pass?

a. Bubbling up the smallest element
b. Sorting the entire list in one pass
c. Bubbling up the largest element to its correct position
d. Dividing the list into halves

The correct answer is: Bubbling up the largest element to its correct position
